Andela Products equips St Bart's to solve glass problem

Beautiful St. Barthélemy in the French Caribbean has a population of only a little over 9,000, but receives 200,000 visitors every year. Chances are, nearly every one of those residents and visitors enjoys emptying a beverage in a glass bottle from time to time. What to do with all the glass bottle waste? In July of 2017 La Compagnie Commerciale du Port Franc in St. Barthélemy followed the example of several nearby islands and installed an Andela Pulverizer to transform dirty, bulky and expensive-to-ship glass bottle waste into clean reusable aggregate.

Using the Andela GPT-1HD Glass Pulverizer System, St. Bart's can now process 3-5 tons per hour of glass bottle waste. Oversized non-glass contaminants such as paper labels, metal caps, corks, etc. are separated out and the result is a safe-handling recycled glass product, sorted into sand or gravel sizes, which can be reused or sold right in the local community.

To learn more about glass recycling and specialized pulverizing equipment, visit www.andelaproducts.com or contact Equipment Sales Jeremy Croft at (315) 858-0055 ext. 224.
