

CRT RECYCLING SYSTEM

The **Andela CRT Recycling System** is revolutionary in its ability to process whole CRT, VDT and TV Tubes into separate glass and metal products!

How It's Done...

- Prepare the **CRT** for processing by removing the Plastic Case, Metal Chassis, Yoke, IC Boards, Electronic Gun and Metal Strap.
- Ready to process, the **CRT** is a whole glass tube with a metal frame and screen inside the tube.
- **CRT** Tubes are loaded into the **Andela CRT Recycling System** and broken down into a glass product separated from the metal components.
- The system will process one tube every three to five seconds.

Features...

- The **Andela CRT Recycling System** is a self contained unit that protects the operators and the environment.
- The **Andela CRT Recycling System** is complete with its own dust collection system.
- An optional loading conveyor brings the **CRT's** ready for processing into the system and optional unloading or stacking conveyors remove the metal and processed glass.

Andela Provides the Innovative Solution to CRT Recycling
